Pensions Committee

Re: Conferencing the Advancing Research for Neurological Diseases Act

Representatives Burgess and Van Hollen, and Senators Isakson and Murphy,

On behalf of the undersigned organizations representing the needs of people with neurological conditions, we applaud you for your passionate leadership of the Advancing Research for Neurological Diseases Act (H.R. 292 / S. 849). We could not have made this much progress without your tireless dedication to improving the lives of people affected by neurological diseases. Thank you for including us in this process and keeping us apprised of ongoing developments concerning this legislation.

By establishing a data collection system to track the incidence and prevalence of neurological diseases, this bill will provide a foundation for evaluating and understanding aspects of neurological diseases on which we currently do not have a good grasp—such as the geography of diagnoses, variances in gender and disease burden. In February, changes were made to the Advancing Research for Neurological Diseases Act to secure its approval by the Senate Health, Education, Labor, and Pensions Committee. As the bill continues to advance, we wanted to stress the importance of certain provisions in the Advancing Research for Neurological Diseases Act. If, for instance, the bill is ultimately conferenced with the House-passed 21st Century Cures Act, we believe the conferencing process is a good opportunity to reach middle ground and ensure that the bill’s final language is as strong as possible in order to achieve a successful data collection system that will prove beneficial to researchers.

As Congress continues to advance the Advancing Research for Neurological Diseases Act, we urge the following changes to the final conferenced version:

- Reinstate the $25 million authorized appropriations so that the Centers for Disease Control and Prevention has adequate funds to develop the data collection system without compromising funds for other very important public health programs and services;
- Coupled with providing adequate funds, make the Secretary’s establishment of the data collection system mandatory instead of permissive; and
Give the Secretary of Health and Human Services, acting through the Director of the CDC, and in consultation with specified individuals and entities, the discretion to decide which neurological diseases and conditions will be tracked. Additionally, eliminate the restriction on the number of diseases and conditions to be tracked.

Thank you for your close attention to this matter. We believe that these changes are necessary to creating the most effective data collection system possible. We are incredibly grateful to have partnered with you in this endeavor. With our combined efforts, we are one step closer to better understanding, treating and finding cures for neurological diseases.
